

QThread

ComponentBase

pacpus::SickComponent

```
classDiagram
    class QThread
    class ComponentBase
    class pacpus_SickComponent["pacpus::SickComponent"]
    pacpus_SickComponent --|> QThread
    pacpus_SickComponent --|> ComponentBase
```

The diagram illustrates a class hierarchy. At the top, there are two base classes: 'QThread' on the left and 'ComponentBase' on the right. Below them, centered, is a derived class 'pacpus::SickComponent'. Two arrows point from the 'pacpus::SickComponent' box upwards to the 'QThread' and 'ComponentBase' boxes, indicating that 'pacpus::SickComponent' inherits from both.
